

SINCE THIS PORTION OF THE WRITTEN MANUSCRIPT IS AN ACTUAL TRANSCRIPTION OF THE RECORD SOME PORTIONS DO NOT APPEAR AS A RESULT OF AN INABILITY TO UNDERSTAND THE WORDS SPOKEN. IN THOSE CASES THE SYMBOL _____ WILL APPEAR.

Bg noise
"Testing, testing, testing. Zero, zero, zero. Uh. Now that I have it leveled I don't know what to say. Uh, this is an experiment, un-authorized. My reasons for doing this experiment are several. Uh, first, um, as I said this is totally unauthorized. I'm not even signed to be in this area. But I had this idea for doing this objective (pause) this is a superior start. If the second stage of this operations goes negative error, I estimate placing this disk retro to approx time year AD One Nine Five Three, 1953, possibly four. That year's the only frequency I could remember without getting tapes up. I'm not even certain I have that correct. But it is approx. And if it's in error then nobody's hearing this anyway. I can see I should have prepped this better. Uhhmm. I'm storing this feed on one of these discs that have been located in this division for, uh, an extended period of time. I had guessed they're utilized for ordinary blue verbal data banking, but I saw on core night seventeen six that same class discs were also utilized _____ late A.D. You had a lot of these mechanical products. Retro In.

And this data generated a cortical image of how I could recircuit Solex Two. (Beep, beep, beep, beep) (Interruption from fee D) (Re _____ audible) _____ Twelve service data fourth in-six Ho transfer to _____ slash fourteenth Code 65 BB (audible reply). Negative, it will self correct until day seventeen. Cut a green tester to see if it blows any du (reply) Verify, read out an R & L. B das one seven two si four four seven six one, panel six, code four F two two. (Beep, beep, beep, beep, beep). I, uh, image this method for re-circuiting Solex Two which is this unit in the adjacent module that, uh, basically it transposes time frequencies for interplanet matter transport. This blue verbal seems impossibly slow, but if I shift to yellow or UV it might not receive. UV wouldn't take on this disc anyway without an adapter. Anyway, I had estimated that on high energy levels Solex could walk this disc retro to the negative templative current setting which is, as I said, should be approx. year AD One Nine Five Three, possibly four: I don't think this has been done before. I have no knowledge of reason. The hardware's all long term stuff, but your, your mind just doesn't seem to function that way. Retro, I mean. Factually, we have a semi black picture of that time, your time. All mechanical and disunified. Before major co-ordination. But at base, if, personnel just, uh, think about it. No knowledge of reason. I do. I respond pro to the cortical image that I have of presidents, voting, animals, big airplanes. All kind of physical, slow. My estimated reason for this reaction is my failure to receive my history two infusion. That's the only reason I can

image. I was a-blah when my key section had their key infusion administered Day twenty one two forty six. And my first re-skit never came through and my second re-skit, nine twenty three five forty six, I, never showed up. That's a spontaneous action. I've been doing data pick up whenever I can plug in, but without that first infusion you're definitely limited I suppose that's why I respond pro to this cortical image of the past that I made. Max, I wish I knew time lapse since A.D. 1953. Unable to head compute without negative knowledge of scale, and there's no terminal in this room.

Now is two fifty eight, but that's, uh, CDS, Carbon Dating System. Which must have negative meaning for you. And atoms are shorter than years anyway, so, dry loop. But I estimate it has not been too long retro in straight linear time. See, we have some sustainers now that were born approx. A.D. 1953. I've touched with some of them. But they are so full of plastic that it's next to impossible to get anykind of print out from them. (Beep, beep, beep, beep). (Pause) on you too holy baby touch me. (Pause. You were missed but no energy loss I'm doing blue verbal. Yes, querie location? The cone in open twenty one six? Checked it on call and estimated you gotta have. Report? (Pause). Aw, B Axis. You're on rec time. I thought it was in district. Queries travel time.(Pause). Seventeen minutes. Worth it? (Pause). Oh, Max, now you're holding my hand. But any mission is a classic diathol in 61 station. Querie innovation. A de simulants. (Pause). Any solitud simular (Female voice). Check alter one four ze reads 19K reads 16K. Manual feedback in the gate. Interrupt, touch you later. (Beep, beep, beeps). More varied input). CDS intro 1953 I estimate 36, uh, 48 years.

My lack of cordical scale, how long a year is. History infulsion. It's impossible to pick up singlecell data like that independently, and I've been manually requesting reskits for mils. My primary impulse now is to feed you questions, but that would yield zilch effectiveness under circumstances. Querie. *Do you know of feedback from A.D. If so, utilize it.* I have a definite positive impulse to touch with you. Meanwhile necessitates I give one way blue verbal flow at which I function zilch and hope it receives. I can't believe this operation hasn't been performed before.

And me a J-3. My ident. I haven't even told you my ident., for brain re-jello. My name is Decker, T.L., and index J-3, as I said, and my T-group is the roaring vectors 252 of New East Web Charlie. That's single stack, but it's one of the best boards on line, and really requires (Pull up?) for a J-3 out there. I, I don't know how indexes were in your annum. but present J-3's on red rating now, and that's nothing to be put under by. A bio-parent of mine is doing programming in Denver, and she estimates possible to shift my record up to bank five, and possibly six, but I told her negative bother. Product of a shift like that would be my rec

time programmed at mid-annum with approx. fourty two hours additional travel time — possible sixty seven degree BI credit additional, and who needs it. The Beta change pay would tote me into gate pos effect. The extra travel TP I could utilize, of course, but, I have a teammate in Denver at Tannelgram who — indicates he could program an extra six hours into my record. Interrupt, I have a feed coming in. If I could get looped into ... (pain response) ... Bloody frontal feed. (Beeps) So now I know all about K axis traffic flow. (Beeps) Origin Twelve, this is, (Interrupted) Origin Twelve, ident Decker, T.L., J-3, CMR 00965 with a normal punch in a blue verbal verifax sheet. Decker T.L., J-3 CMR 00965, receive right frontal feed power 1317. Dig this, contrary to stop order on all frontal feed authorized panel Jason, code 339, effective until individual med-check night 11-88 request manual put-right immediate. Who uses K-axis anyway? (Beeps) (pause) I have malfunction in my nine spot. I don't know what you call it, but we call them spots, stickers, trodes ... The electrodes in your head. In my number nine, which is what the frontal feeds comes in on, it's had its tenderness around it for several days, starting night thirteen-seven, and when feed comes in I manifest pain reaction up to four or five degrees in that hemisphere. I can neutralize it with manual feed on my fourteenth spot, that a teammate told me about, but, those local feeds, they come in so quickly. Interrupt. I have to turn this disk over.

I have an emotional regret. In not requesting one of by unit to co-op in this operation. He can do blue verbal so it's really right on the meter and he'd know what subject matter I should be utilizing. My own evaluation is dry loop, but I, I guess I'll utilize it as a test and repeat everything I can prove pert. — Uh. Ident. is Decker, T.L., J-3, I, I don't know what you want to hear. I guess any data would have interest, so much must be altered. Max, when I image receiving feed from what's going to happen. Just any calss of touch. Then to know the consequences of my action. That's very, very high. Moreckly posted second scheduled co-ordinator with the vectors 2-5-4 primarily in volleyball. We, we've been strong in recent mils. Been pulling credit steady. U-E credits are approx. nineteen sep degrees. Estimate 1847, close to thirty six, which if you don't know is rated X on nearly all new E standards. Our competiitiion is all sub-district so far, I'm also in chess and cinemetrics. And of course the FDE, Full District —. That's something you should see. But, volleyball is my major competitive time involvement. And my non-comp rec time has been mostly at regular stikes centers in Brazil, Australia, and Wenderlun. Also Lunar centers. Atom two five five. Dexter scheduled for days seven-ten. Probably 2 mils. I work a lot in my social interaction teams too. It's important to keep up. There's also the two sixth eight hour CAI time, the CAI's Cultural and Artistic Involvement which has just jumped to two seven one per annum, per source DF day, fourteen-seven. I'm in two

NOTICE:

On February 11, 1969 a recording was found on the elevator at 205 West 57 Street, New York City. In the two years since that time it has been examined, listened to forward and backward and passed from hand to hand, from office to agency, from laboratory to official, with many opinions offered but with no final conclusions reached or decisions made.

Taken strictly at face value, and discounting the high improbability of the fact, the disc, judged solely by its content, was recorded 75 to 100 years from now (with other estimates placing it still earlier or later). Except for the fact that there is no other known instance of an object from another time (in the future) being found in our own, the disc seems otherwise to be quite legitimate and believable. Recorded evidently in a business or office setting, it does not seem to have been intended as a formal or official communication from that time to ours, but appears to be rather a more spontaneous, almost unintentional effort.

Copies of the recording (on a 10-inch, long playing reproduction) are now available for general sale, and can be purchased for \$2.00 (taxes included) from "The Record", Box 3011, New York, N. Y. 10008. Any comments or opinions which might be useful in interpreting the recording may be addressed to Mr. William Hofstadter in care of this address.

CLARK GESNER
87 REMSEN STREET
BROOKLYN HEIGHTS, NEW YORK 11201

February 3, 1972

Dear Mr. Gietzen:

Your letter was referred to me since the copyright for the record "Found on the elevator, 205 W. 57, 2/11/69" is in my name.

I have never felt right about copyrighting the record and agree with you that it most probably belongs in the public domain. The records sent out in recent months have not had any copyright notice. So you are free to do whatever you want with the record.

I was very glad to hear from you too since, according to the article you sent, your desires and aims more closely match those of Decker (on the other end) ~~mm~~ than any I have heard of. Do it! I would dearly love that guy--or anyone out there-- to get some word from now.

I'd also very much like to have a copy of whatever you do with the record, and will pay whatever costs are entailed. Please keep me in mind.

I wish you luck.

Sincerely,

P.S. I'm sorry, there are no photographs of the original record.

The process by which this recording reached the place where it was found is not yet fully understood. Its authenticity as a so-called "artifact" from a future time is also under serious question. Nevertheless it is currently being examined by a group of responsible investigators to determine its validity, as well as to clarify the meaning of its contents and to suggest possible applications for the information contained therein.

Preliminary estimates place the time and location of its origin as approximately 100 to 125 years from the present, recorded somewhere in the area of northern New Jersey.

No attempt has been made to edit or clarify the recording. It is presented here exactly as found, complete in its original form.*

* The source disc itself is 8½ inches in diameter, made of a very thin, rigid plastic material (with no label or center hole), and with an optimal playing speed of approximately 20 revolutions per minute. This reproduction has been made on a ten-inch disc at 33½ rpm so as to be playable on home phonographs.

OPERATING INSTRUCTIONS

11111111111111

set time interval control dial. Black figures indicate PRO. Red figures indicate RETRO.

2222222222

test receptivity. Step into critical area. Allow 30 seconds for sensors to test all channels. A green light indicates machine-acceptable contact. If a red light appears, consult item A-20 of your owner's packet or contact your facilititech.

3333333333

open channels. If contact is not acceptable to bioparty, move channel control switch to RE-SET and repeat step 2. When contact is mutually acceptable move switch to OPEN position.

4444444444

interchange. Interchange will begin when bioparty steps into critical area with channels open.

5555555555

override disconnect. The disconnect option may be exercised by the bioparty at any time. Disconnect control is marked by a circular amber light approximately 3 inches in diameter and is visible in any interchange media.

XTI

The XTI Series Interchange Systems

The XTI series offers some of the most advanced temporal interchange systems currently available. The latest discoveries in earth science have been combined with hardware software self-development to produce XTI. There are several advanced features that distinguish XTI from other SIMMIC systems.

Like other SIMMIC systems, XTI generates polysensory hologrammic media. Recent advances in magnetic flux dynamics make some tactile interchange possible in XTI media. A unique pattern storage and retrieval system allows the bioparty to choose the temporal environment of interchange with a high degree of specificity.

Bioparties experienced in the XTI environment offer some simple guides to optimal SIMMIC operations:

- start with a small time interval, say 5 years pro and increase gradually as you become familiar with the system.
- when acceptable to man and machine contact cannot be established after 5 attempts, it is usually best to postpone any further attempts for at least 24 hours.
- restrict vehicular travel in the interchange media to a minimum. Interchange environments usually offer enough variety of immediate surrounding to make travel over long distances unnecessary.
- do not be too reluctant to disconnect. This option is included to insure the safety and well being of the bioparty. REMEMBER THE AMBER LIGHT.

Interchange sessions have an average real time duration of one hour. There are, however, wide variations from the norm. It is also important to keep in mind that the SIMMIC situation tends to alter the bioparty's perception of the duration of the experience.

For further information about the XTI series or other Xerox systems, contact a facilititech with XTI experience or select video channel XX-1174.
