

PROPOSAL: MAZE, a circular network of intercommunicating paths, 120 ft. in diameter, placed in a field of high grass or dense brush. A congruent, corresponding network of twenty two scanning cameras and twenty three monitors positioned at varying intervals along the paths. Feed from the cameras is relayed to a twelve level time-delay loop, such that a participant in the maze always encounters an earlier image of himself as he moves to the center of the network. Frank Gillette(1972-73)
