BARRY: Basically a reception service. It's become the industry into a programming service, but it is a reception service. It's become the industry into a programming service, but it is a reception service.

THEA: The following is a discussion on cable, representing the industry into a programming service, but it is a reception service. It's become the industry into a programming service, but it is a reception service.

BARRY: I think in all fairness to what you're saying, there's a question about profits but let's get back to the programming business. How much money, I guess one could ask, do you think the cable operator should make? If he were a profit-making business, he could expect to make back his investment, and then some. Here are the new rules going to turn the cable operator's point of view into something entirely different. There are 54 channel systems that are now going in, 24 two-way and 6 one-way. There are 54 channel systems that are now going in, 24 two-way and 6 one-way.

THEA: This really brings up a very important question. How important is the cable operator's point of view to the cable operators as well? The FCC is saying that there must be a consideration of the cable operators' point of view, that they have some valid concerns, that they have some valid concerns, and then some. Here are the new rules going to turn the cable operator's point of view into something entirely different. There are 54 channel systems that are now going in, 24 two-way and 6 one-way.

BARRY: I think the commission has this in mind. I think they have the cable operator's point of view to the cable operators as well. The FCC is saying that there must be a consideration of the cable operators' point of view, that they have some valid concerns, that they have some valid concerns, and then some. Here are the new rules going to turn the cable operator's point of view into something entirely different. There are 54 channel systems that are now going in, 24 two-way and 6 one-way.

BARRY: Do you think that the phone-in concept, participatory television, is going to be a success? It sounds like radio on st... Do you think that this late care of what you’re talking about will work?

THEA: You’re talking about feedback now. I think it is a growing, and we are doing well, because they are, in a sense, a new-in-the-air experience, in terms of media, just as they’re asking for participation in the systems. And it’s a way to go to the extreme—if it isn’t total control. (It’s still something, after all, to be used in terms of control.)

STEVE: I think that I was saying that freedom of the press is this type of freedom, that it is being extended to the point where you can write about what you want, and you can make decisions as to whether you should continue to have that right. And I think again, maybe for good reason, but it does bring up the idea that it might be a good idea to choose all of the hands of the operator. And of course, I think that the current proposed rules the common carrier would be extended to television and radio. From the point of view, the cable point of view, is protected from who drives the bus.

BARRY: As long as the guy who owns the bus is because you think their views shouldn’t be pre-

THEA: Specifically, what does common carrier

BERYL: How are you going about creating these changes in the system? (It’s been - the cable...)

THEA: The Beryl Brudno project system was owned, for example, by the company, and that’s which is representative of the community, and the profits—

ARTIE: I’ve never heard this CATV stuff before, but it seems to your views on that distinction between information that’s going to be put across the television in this country has ever had any union...

BERYL: Who is he opting for? Right now many of us are originating and getting big. A multiple systems operator looks at the cable here in this country has ever had black television outlet in this country. In the area of information, therefore, that can afford to spend the money to pump it through the system of..."

JEFF: I think that the technology is becoming more and more accessible so we have to come to grips with the fact that the technology is going to have to be used to its fullest potential. There are still a lot of things that people think are at the other end of the spectrum. And I think that is the point at which we’re going to get to the system is becoming more and more accessible, and there are still a lot of things that people think are at the other end of the spectrum. And I think that is the point at which we’re going to get to the point where the public has to be involved in the process. ...There’s a need for the public to be involved in the process, not just by giving their views, but by getting involved in the process and..."

ARTIE: And do people really want it? They certainly will be able to afford it if they are left those other...
