Exempt for broadcast television, every major information medium in America had its genesis in men who started them because they believed that, in some way, it served a useful function. Some see this in the same kind of light as a for-profit business. (The profit motive is a necessary part of the system to generate resources.) It is a system of competing and conflicting values, innovations, and ideas that work together to generate new patterns of thought and behavior. The need to experiment with economics and video information exchange simultaneously.

The problem with Avco is that their system is not yet a viable business proposition. It is not yet at the point where they can attract enough investors to make it a viable venture. Until that happens, they will have to continue to rely on government grants and other forms of financial assistance.
