Solid state electronic technology has developed the ability to produce circuits. When the engineer develops a circuit, it is to be used as a system of energy. A parallel system of energy is created by putting multiple circuits in a network. Video reality, in video space, is the ability to create a media environment which will result in the video technology controlling the interception of space and time of physical reality, in universe space.

The loop that is presently being formed around the planet earth must be interconnected by a network system which will result in the characteristic computer and network system. This loop has the potential to control the interception of the universe space and access the control of universe space.

Video reality, in video space, is the ability to create a media environment which will result in the video technology controlling the interception of space and time of physical reality, in universe space.

By Willard Van De Bogart

LASER LIGHT IN VIDEO SPACE

This article attempts to bring into being the nature of electromagnetic fields which exist in the universe space. Basic attention will be on the ability to create a media environment which will result in the video technology controlling the interception of space and time of physical reality, in universe space.
